

INSTALLATION INSTRUCTION

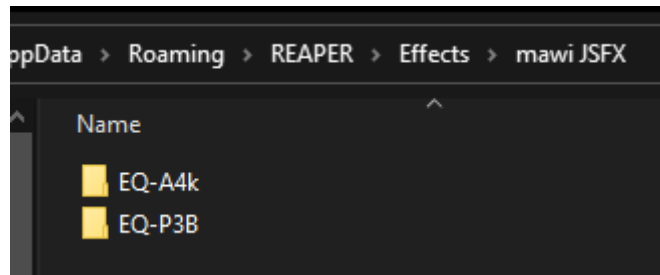

There are two ways to install this plug-ins. One time manually by copying a folder into a directory or via the ReaPack script. In the first method, download the ZIP file, click in REAPER on the menu: Options > Show REAPER resource path in explorer/finder...

The explorer/finder opens. Go to the Effects folder.

Create a folder named "mawi JSFX" in the Effects directory and extract the zip file with the folders into the mawi JSFX directory.

Open the FX browser in REAPER and scan for new plug-ins or simply restart REAPER, then REAPER will also scan for new effects. Now the plug-ins are ready for use.

Another way of installation is to use ReaPack. If you have not stalled ReaPack, please follow these instructions: <https://reapack.com/user-guide#installation>

If you have successfully installed ReaPack, add this repository link to ReaPack:

You can learn how to use ReaPack on their site.

Refresh your FX browser or restart REAPER and find the plugin.

Have fun with my free plug-ins.
